

Take the Novus Varia for a spin.

Automobile aficionados buy luxury cars because they offer the best balance of functionality and bells-and-whistles. The same holds true for the Novus Varia, the industry's finest three-wavelength photocoagulator from Lumenis.

Retinal surgeons throughout the world trust the Novus Varia's solid-state efficiency. It's three diode-pumped lasers in one, which means you can switch between green, yellow, and red lasers using the unit's easy-to-use on-board full-color touch screen. It delivers sharply defined, evenly distributed power where you need it. And its smart-sensing dual fiber ports allow you to

connect multiple optical delivery attachments simultaneously, saving you and your patients time.

See for yourself why the Novus Varia is the premier photocoagulator, preferred by the world's top specialists. Take it for a test drive today.
