also printer to supply indicia.

The brightest dentists in the world are the ones who work hard to stay on top of the latest techniques. They're always thinking. Thinking about ways to make their patients feel more at-ease. Thinking about ways to perform new procedures the best possible way. Thinking about ways to make their businesses grow.

The OpusDuo is the most sophisticated laser available today. It's a dual-wavelength system, which means it's two lasers in one: Er:YAG, which is best for hard tissue treatment, and CO₂, which is ideal for soft tissue.

The OpusDuo also features contact sapphire tips for tactile removal of hard and soft tissue, a variable-speed footswitch, and pick-up-and-go wavelength selection so you won't have

to think about restarting your laser to switch modes.

It's simply the best technology you can get.

Now that's something to think about!
